Project Design Phase

Proposed Solution

Date	28 September 2026
Student Name	Mohamed Radhuwan
Project Name	Metro Ticket Generating System in ServiceNow
Maximum Marks	

Proposed Solution

The proposed solution digitizes metro ticket booking using ServiceNow. A Service Catalog item collects Source, Destination, Passenger Type and Number of Tickets. Validation and auto-populate rules keep the data clean, a fare logic script calculates the fare, and a QR code digital ticket is generated instantly. Flow Designer and Notifications complete the passenger experience.

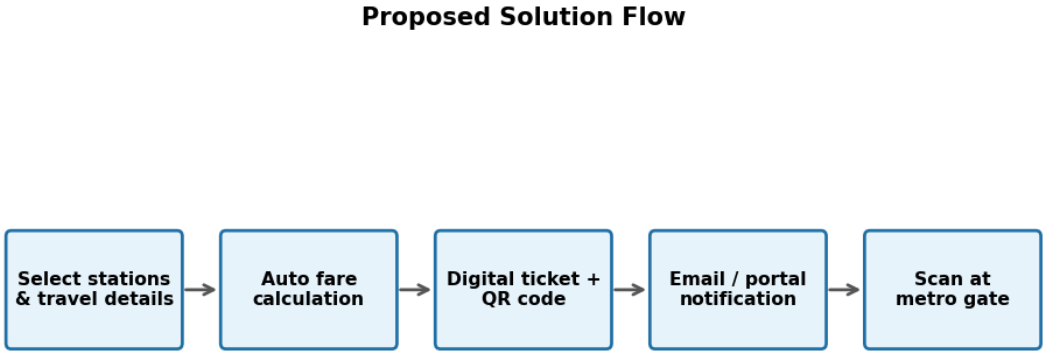

Figure 1: Proposed solution representation.

S.No.	Parameter	Description
1	Problem Statement	Manual metro ticketing is slow, error-prone and paper-based.
2	Idea / Solution description	Automated ticket booking with fare calculation and QR code generation in ServiceNow.
3	Novelty / Uniqueness	Service Catalog, Flow Designer and Notifications combined with QR-based digital tickets.
4	Social Impact / Customer Satisfaction	Shorter waits, easier access and less paper usage.
5	Business Model / Revenue Model	Improved fare collection through digital payments (UPI, cards, wallets).
6	Scalability of the Solution	Extendable with analytics, WhatsApp bookings and more stations.
